

Quarterly Population Report

First Quarter 2016

Record Numbers of Immigrant Offset Interprovincial Losses¹

Alberta's first quarter population growth led the country despite its economic woes. Record-setting immigration more than compensated for net outflows of interprovincial migrants and non-permanent residents. Alberta's relatively young population ensured that natural increase continued to significantly support growth.

As of April 1st, 2016, Alberta was home to 4,249,842 people, an addition of 17,883 new residents this quarter; an absolute gain surpassed only by Ontario.

After falling behind Manitoba last quarter, Alberta's growth once again outstripped all others, posting first quarter growth of 0.42%, well above the national average (0.30%). Of the provinces, Manitoba had the second highest growth at 0.38%.

Net international migration was responsible for most of Alberta's fourth quarter expansion, contributing 0.28%. The impact of natural increase continued to be significant (0.18%), while net outflows to other regions of Canada put

¹ All data are from Statistics Canada. Estimates from 2007–2016 are based on the 2011 Census adjusted for net census undercount and incompletely enumerated Indian Reserves. All estimates are subject to revision.

downward pressure on the growth rate, shrinking the province's population by 0.04%.

On an annual basis, the strong showing this quarter meant that Alberta led the provinces with 1.78%² in annual growth, over half a percentage point higher than the Canadian average (Table 1). In absolute numbers, Alberta added over 74,000 new residents; only Ontario added more (Table 2). Despite this large addition, annual first quarter growth continued to moderate off its highs and was the lowest since 2011 (Figure 1).

Migration

Over half of Alberta's growth this quarter was driven by migration, which added 10,262 new residents to the province. This was up slightly from the same quarter last year, but

² This growth represents year-over-year variation (April 1, 2015 to April 1, 2016).

Table 1: Population & Growth Rates Canada and Alberta

Population			Yearly Growth Rate		
1-Apr	Canada	Alberta	1-Apr	Canada	Alberta
2011	34,230,654	3,768,845	2011	1.01%	1.44%

about half the level seen in 2014. Net international migration more than offset net interprovincial outflows.

Interprovincial migration

Heavily influenced by economic conditions in the province, net interprovincial migration dipped into negative territory between January and March, with a net outflow of 1,788 people (Table 4). This was the second straight quarter of net losses for Alberta. For the first time in over six years, Alberta had the largest net outflow of interprovincial migrants in the country. This is a stark reversal of the recent trend which saw Alberta gain the largest number of net interprovincial migrants for 19 straight quarters between 2010-2015.

Most of the country experienced first quarter net outflows of interprovincial migrants. Following last quarter's trend, British Columbia and Ontario were the only two regions in the country to have sizeable net interprovincial migration gains (5,067 and 1,101 respectively). Alberta saw the largest net losses, followed by Saskatchewan (-1,316) and Quebec (-1,221) (Table 3).

For the eight straight quarter, Alberta lost people to British Columbia (-2,628). This net outflow seems to be picking up steam, as the number Alberta loses to its western neighbour has been increasing. Net outflows to Ontario continued for a second straight quarter, with Alberta losing 664 people to the largest province in the country (Map 1).

Alberta saw a modest net gain of migrants from the rest of the provinces, with most arriving from Saskatchewan (749) (Table 3).

Net International Migration

Net international migration was the major contributor to Alberta's growth this quarter. Record-setting immigration levels compensated for continued net outflows of non-permanent residents (NPRs). Alberta welcomed 12,050 net new residents from outside of Canada, a very strong first quarter gain.

The first quarter of 2016 marked a new record for immigrant landings in Alberta, with the addition of 15,356 new permanent residents (Table 4). While this is almost twice as high as the same quarter last year, Alberta's share of Canadian immigrants was slightly lower than the previous two quarters (17.8%). Only Ontario had a higher share of immigrants this quarter (37.0%). Some Syrian refugees landed in Alberta in the first quarter, however these refugees have not been landing in large enough numbers to account for all Alberta's record setting immigration.

The Government of Canada recently announced its immigration target, aiming to welcome between 280,000-305,000 new permanent residents in the 2016 calendar year³. The first quarter gave Canada a good start on achieving this target, with just over 86,000 immigrants entering the country. This was the highest quarterly number of landings in the data series, which began in 1971.

³ For more information, please see: [2016 Immigration Levels Plan](#)

For the sixth quarter in a row, Alberta experienced net outflows (-1,900) of non-permanent residents (NPRs), although these flows were more muted than the outflows of the same quarter last year. Alberta was the only region this quarter to experience sizeable net outflows, with Canada welcoming a net inflow of NPRs, the vast majority settling in Ontario. The net outflows have been reducing Alberta's stock of NPRs, which currently sits at around 90,000. This was down 2% from last quarter, making this the smallest loss since the net outflows began.

Alberta has been the only province in the country to see persistent net outflows of NPRs since the Temporary Foreign Worker Program policy changes were implemented. Alberta has had a net outflow of over -29,000 NPRs since the fourth quarter of 2014. The next biggest loss was half of Alberta's; British Columbia, which was over -14,000.

Natural increase

Alberta added 7,621 new residents in the first quarter of 2016 from natural increase. This is a result of 14,240 births minus 6,619 deaths (Table 4). The province continues to have the highest natural growth rate of all the provinces (0.18%).
