

Quarterly Population Report

Second Quarter 2017

Interprovincial Outflows Eases Population Growth¹

Continued net outflows of interprovincial migrants moderated population growth in the second quarter, despite strong natural increase and international migration. Alberta's population growth dipped below the national average this quarter, with the lowest second quarter year-over-year growth since 1988. Despite slower growth, Alberta added close to 50,000 people since July 1st of last year.

As of July 1st, 2017, Alberta was home to an estimated 4,286,134 residents. The province grew by 0.32% this quarter, an addition of 13,736 people from April 1st. Net outflows of interprovincial migrants (-0.12%) tempered the province's growth, while net international migration added 0.24%, and natural increase (births minus deaths) accounted for 0.19%.

On a year-over-year basis, Alberta's population growth fell below the national average for the first time since the third quarter of 1989, with Alberta growing by 1.17%² compared to 1.22% nationally (Table 1). Of the provinces, PEI

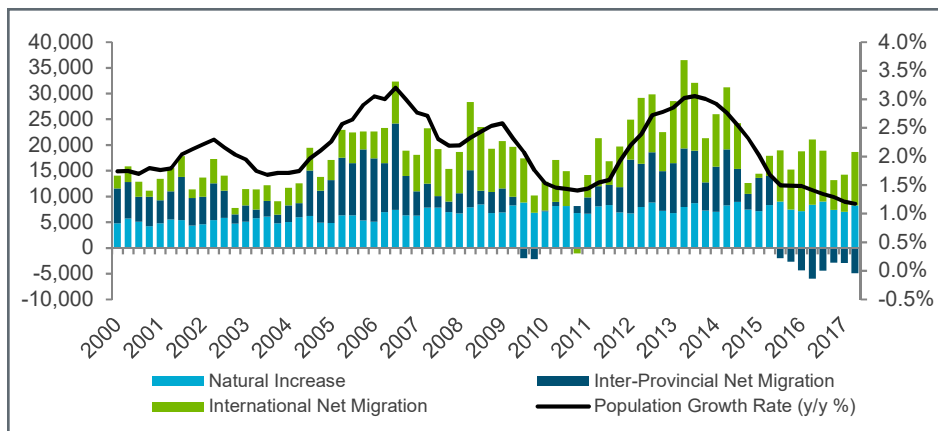

1 All data are from Statistics Canada. Estimates from 2007–2017 are based on the 2011 Census adjusted for net census undercount and incompletely enumerated Indian Reserves. All estimates are subject to revision.

2 This growth represents year-over-year variation (July 1, 2016 to July 1, 2017).

Table 1: Population & Growth Rates Canada and Alberta

Population			Yearly Growth Rate		
1-Jul	Canada	Alberta	1-Jul	Canada	Alberta
2012	34,750,545	3,880,755	2012	1.19%	2.39%
2013	35,152,370	3,997,950	2013	1.16%	3.02%
2014	35,535,348	4,108,416	2014	1.09%	2.76%
2015	35,832,513	4,177,527	2015	0.84%	1.68%
2016	36,264,604	4,236,376	2016	1.21%	1.41%
2017	36,708,083	4,286,134	2017	1.22%	1.17%

Figure 1: Alberta Components of Population Change, 2nd Quarter

and Ontario had the highest annual growth this quarter (1.71% and 1.55%, respectively), while Alberta was in the middle of the provincial pack (Table 2).

In absolute terms, Alberta added 49,758 new residents over the past year. Despite the large addition, annual census year growth was below last year's rate, and growth has been slowing since 2013 (Figure 1).

Revisions

Population estimates and the components of growth are revised annually with the availability of recent updates to data sources, or additional data sources only available on an annual basis. This release contained downward revisions to Alberta's population back to October 1, 2012. The component with the largest revision was net interprovincial migration in 2015–2016, which was

Table 2: Population of Provinces/Territories as of July 1, 2017 and Growth Rates since July 1, 2016

	Population	Growth Rate (y/y)
Canada	36,708,083	1.22%
NL	528,817	-0.28%
PE	152,021	1.71%
NS	953,869	0.55%
NB	759,655	0.30%
QC	8,394,034	0.87%
ON	14,193,384	1.55%
MB	1,338,109	1.52%
SK	1,163,925	1.34%
AB	4,286,134	1.17%
BC	4,817,160	1.25%
YT	38,459	0.98%
NW	44,520	-0.22%
NV	37,996	2.20%

revised down significantly from preliminary estimates released last year (from -2,877 to -15,108). This revision lowered the 2015-2016 population growth from 1.8% to 1.4%.

Migration

Weighed on by net outflows of interprovincial migrants, total net migration added 5,486 new residents in the second quarter (Table 4). Despite robust net international migration, net interprovincial outflows led to the lowest second quarter net migration since 1995.

Interprovincial migration

Interprovincial migration is highly reactive to economic conditions, although it tends to respond with a lag. Despite a rebound in Alberta's economy, this quarter saw continued net losses to other parts of the country, rounding out two straight years of net outflows. Alberta lost -4,914 people this quarter, the largest net outflow in the country, followed by Quebec (-3,377), Manitoba (-1,891) and Saskatchewan (-1,814) (Table 3). Ontario and British Columbia experienced the biggest net inflows at 7,266 and 5,034, respectively.

What Alberta lost, others gained; the largest net outflows were to BC (-3,514) and Ontario (-1,648) (Map 1). This was the thirteenth consecutive quarter of net losses from Alberta to British Columbia, and the seventh straight to Ontario.

Alberta's net outflow in census year 2016-2017 was -15,131, slightly lower than that of the previous year (-15,108). Net interprovincial losses this year were the highest in nearly 30 years (-23,223 in 1987-1988).

Net interprovincial migration is always a balance of in-flows to and out-flows from a region. Changes in the magnitude of these two components provides additional information on the net movements. Alberta's net interprovincial outflows of the past two years were mainly due to fewer in-migrants (down 25,900 compared with 2014/2015) rather than more out-migrants (up 10,800 compared with 2014/2015).

Net International Migration

Although still elevated, immigration levels softened slightly from April to June. Immigration to the province was 12,304, down about 3,000 from the same quarter in the previous year (Table 4). This follows the national story, where immigration levels fell from 88,289 to 78,021 over the same period.

Alberta's share of immigrants to Canada was down to 15.8% this quarter, the lowest second quarter share of the past four years. Ontario and Quebec had the highest shares in the country (34.9% and 20.6%, respectively), while Alberta was third highest.

Annually, immigration to the province was the second highest on record, down slightly from the high of the previous year (44,091, and 57,839, respectively) (Table 4). This was the same pattern seen for Canada (272,666 and 323,173, respectively).

Alberta continued to see net outflows of non-permanent residents (NPRs) this quarter (-971), although these losses have tapered off compared to the same quarter in the previous two years. Alberta bucked the national trend, as all other jurisdictions had net inflows. Ontario saw the largest influx at 26,017, followed by Quebec with 11,963.

As of July 1st, the province was home to about 76,000 non-permanent residents. At 8.5% of the national total, Alberta had the fourth highest share. This is down from a peak of 14.8% as of April 1st, 2014.

Natural increase

Natural increase continued to be a strong driver of population growth in the province. In the second quarter of 2017, Alberta experienced a natural increase of 8,250, the result of 14,557 births and 6,307 deaths. Nationally, Alberta continued to have the highest natural growth rate of the provinces (0.19%), a 36 year long trend.

Population Age Structure

While strong interprovincial migration into Alberta in the recent past helped slow population aging, interprovincial net outflows from the province have accelerated the aging of the province. Alberta remained the youngest of the provinces, but aged over the past year, its median age increasing from 36.4 in 2016 to 36.7 in 2017. Only Newfoundland had a higher increase (0.4 years), while Alberta kept pace with New Brunswick (0.3 years).

Despite aging, Alberta remained the most youthful province. About 7 out of 10 people in the province were of working age (15-64), slightly above the national rate of 67%. Alberta also had the lowest proportion of seniors (65+) of all the provinces at 12.4%.

¹ The sum of quarterly in- and out- interprovincial migrants may not be equal to annual interprovincial in- and out- migrants from 2011 onwards. It is however possible to add quarterly net interprovincial migration estimates to calculate annual estimates.

² Estimates of Non-Permanent Residents (NPRs) represent the number of "...persons who are lawfully in Canada on a temporary basis under the authority of a temporary resident permit, along with members of their family living with them. Non-Permanent Residents include foreign workers, foreign students, the humanitarian population and other temporary residents. The humanitarian population includes refugee claimants and temporary residents who are allowed to remain in Canada on humanitarian grounds and are not categorized as either foreign workers or foreign students." (Statistics Canada)

³ Includes NPRs

⁴ The sum of the components may not equal the quarterly population change due to differences in the methods used to derive intercensal and postcensal population estimates.
